

School of Solana

LECTURE 6

Frontend for Anchor Projects

About this lecture

About this lecture

- Frontend - Hands On Example
 - Brief intro to frontend on Solana
 - Deploy to devnet
 - Solana Dapp scaffold for React/Next.js
 - Frontend for our banking app

Frontend for Solana Dapp

- **Frontend**
 - Frontend will be using the browser's wallet.
 - We will interact with our program and associated PDAs
 - Create PDA Account
 - Create Bank
 - List all banks (All PDAs)
 - Deposit
 - Withdraw

<https://github.com/solana-labs/dapp-scaffold>

Final Task

Final task requirements

- Anchor program using PDA deployed on devnet.
- At least one Typescript test for each Anchor program instruction.
 - Tests should contain not only happy path but also un-happy path scenarios.
- Simple front-end deployed using your preferred provider.
- Readme.md file with:
 - Brief description of your project - how it works and what is it for.
 - If you succeeded to deploy the Anchor program and FE, than the link where we can see the result.
 - How to build and test your Anchor program locally.
 - How to run the front-end app locally.

Thank you

See you next time!
